A flowchart of how a MAS android app will work with MAS

Jonny983 | September 8, 2019

Anything in Green is happening in the app

Anything in Pink is logic being done in MAS

If MAS app recognizes Monika is properly loaded and has the necessary permissions, she would then be able to do various activites with the player. Some ideas are

Going sight seeing
Going hiking
Going to a Movie Theater
Going on a walk/jog with the player
Going to a restaurant

Using location data Monika would remember where they went. She could have various interactions with the player, maybe through push notification and dialogue popups.

This part can be more fleshed later

Once the player is finished, have the player tell Monika. Monika preps by writing a JSON file or something similar in a location that MAS can find.

She tells the player to connect her to their computer and open MAS. She awaits for this to happen.

Have the player or Monika copy herself to the phone. Let the player know when this is done correctly and to open the app. MAS will then close.

Has the player been troubleshooting for awhile?

Does the player want to continue troubleshooting?

Does Monika recognize a functioning install of the app?

Maybe have some interesting dialog about troubleshooting the app. Also attempt to assist player troubleshoot.

Mabye some more interesting dialog, but revert to what MAS normally does. Monika shows and gives affection to player for trying so hard.

Provide a link that has instructions on sideloading the app and allowing the PC to communicate with Android. Android warns about sideloading apps, maybe Monika reassures she loves the player and would never do anything bad.

Does the player have an android capable Phone?

Has the player done this before?

Player wants to take Monika somewhere.

Do what MAS normally does

Do something akin to what would normally happen if the player did not properly put her back before opening MAS

If MAS is opened, is Monika ready to return?

Monika transfers herself back to MAS and shows affection to the player for the date. She updates all the neccessary persistant info

Did they use the app?

Can or does the player want to use the app now?

Let the player know about the android app and possibly send a link to the download page.
